**Managing Impacts of Supply Chain Disruptors, Renewable Energy, Emerging Technology
on the Maritime Transportation System (MTS)**

PANEL:
OFFSHORE ENERGY PORT INFRASTRUCTURE RISK

November 15, 2023

MARINE OPERATIONS, TRANSPORTATION CAPACITY & CAPABILITY NEEDS

- What will need to be identified as far as physical laydown and mobilization sites?
- Which (and how many) project-specific marine assets are not normally found here in the USA (Jones Act)?
- What will be the different types of equipment that will be needed to support the installations?

MARINE OPERATIONS, TRANSPORTATION CAPACITY & CAPABILITY NEEDS

- The many needs for the planning, execution and operation of the proposed offshore energy options
- Pre-existing marine-related needs and services that will need to continue as there very large and time-consuming offshore installation projects are constructed and ultimately operated.
- Marine salvage and firefighting challenges, USCG and private operator expectations, bandwidth to cover all of the needs.

Thank you!
